

Case Study Belarus

In late 2006, the Navistar Inc. plant located in Melrose Park, Illinois partnered with Diesel International to supply engines and spare parts to the Minsk Tractor Works in Belarus. Minsk Tractor Works is the second largest manufacturer of tractors in the world.

As an experienced engine and equipment crating company, Rollins was recommended by Navistar to crate and package their engines and spare parts.

Rollins was also tasked by Diesel International to receive and manage the engines and spare parts inventory. Rollins was then able to crate 3 engines per crate resulting in 21 engines and 21 spare part kits per container.

In all, since the beginning of the relationship, Rollins has crated, packaged and shipped for export, 107 containers or 2140 engines.
